Mediterra Community Development District

C/O Wrathell, Hunt and Associates

9220 Bonita Beach Road, #214

Bonita Springs, FL 34135

Ref: Mediterra (2 Visits) Nightly Cane Toad Visits

Dates Completed:

Monday Night, March 28th into the 29th Tuesday Night, March 29th into the 30th

Summary of Visit: On the first night, March 28th, the crew arrived on site and completed a thorough inspection of the property. They completed the East side of Mediterra first and then moved to the West side. There was an estimated count of 170-180 Cane toads removed during this nightly visit.

On the second night, March 29th, the crew arrived on site and completed a thorough inspection of the property. They worked on the West side of Mediterra. There was an estimated count of 140-150 Cane toads removed on this nightly visit.

Altogether, there was an estimated count of 310-330 Cane toads removed for the month of March. There was higher Cane toad activity found throughout the golf course. A few lakes showed Cane toad tadpoles, but for being the first round of breeding, the lakes are in overall good shape. So far there were cane toad tadpoles and eggs seen and removed from a few lakes. We had a crew in there during the day working on tadpoles and a separate report will be sent. Not all tadpoles are Cane toads, there are native tadpoles present as well.

Observations: The Crew continues to notice a nice population of Southern Toads on property. These toads are very beneficial to have on property and are not toxic like the Cane toads. They look similar, so we've added pictures to the report to help identify the species. It is positive to see the Southern Toad population grow after removing so many Cane toads.
